

# Warning Tags and Labels – Harnesses

Klein attaches highly-durable warning and instruction tags/labels to its OPE products. In the event any of these tags or labels become unattached, lost, or damaged, contact the Klein Tools Sales Department, toll-free, at 1-800-553-4676 for information on how to have the tags replaced free of charge.

## Types of OPE Warning Tags/Labels

This section contains black and white reproductions of Klein OPE warning tags/labels. They are organized by product category. Some warning information for connecting devices is printed on a durable label wrapped around the lanyard.

A set of plastic warning tags is attached to the majority of OPE products.

Each set contains four types of warning/information tags:

1. **A General Hazard Tag** will be attached to each OPE product.
2. **General Warning Tags** will be included on all OPE products in a particular category. For example, all OPE harnesses will have general harness warning tags.
3. **Specific Warning Tags** will be included for each class of products within a particular category. For example, Cat. No. 87012 and 87020 harnesses have their own specific warning tags.
4. **A Product ID Tag** will be attached to each OPE product.

## General Hazard Tag for All OPE Products

This tag is the first in a set of warning tags which will be attached to each Klein OPE product.

## Product ID Tag for All OPE Harnesses

This tag (front and back sides shown) is the last in a set of warning tags which will be attached to each Klein OPE harness.

| <div><div>READ BEFORE USE</div><div><div><b>WARNING</b><br/>A fall could result in serious injury or death. Do not use unless properly trained. Read and follow all instructions and warnings.</div><div></div><div>READ BEFORE USE</div></div></div> |         |       |

- Read, understand and follow all instructions, cautions and warnings attached to and/or packed with this and all other occupational protective equipment before each use.
- For use by **properly trained professionals** only.
- **Employer** – Before allowing the use of this equipment, instruct your employees as to its proper use and alert them to these warnings.
- Harness **must** be worn so that the fall-arrest D-ring is centered in back.
- **Fall-arrest anchorage must** support a minimum of 5,000 lbs. (22.2kN) per attached worker and be independent of worker support.
- Attach fall-arrest connecting devices that meet OSHA standards only to the rear fall-arrest D-ring.
- **Rig to avoid contact with structures below in the event of a fall.** The free-fall distance must not exceed 6 ft. (1.8m). If using a deceleration unit, add 3-1/2 ft. (1m) to free-fall distance to allow for unit extension.
- **For fall arrest, always** keep anchorage at or above shoulder height to minimize fall distance.
- OPE equipment **must be destroyed** if subjected to impact loading.
- OSHA requires that impact force in a fall **NOT** exceed an 1,800 lb. (8kN) limit with a harness. At a given weight, the longer the free fall, the greater the resulting impact force. Therefore, minimize slack in fall-arrest connecting device or use deceleration unit to stay under 1,800 lbs. (8kN).
- Whenever there is risk of a fall, personal fall-arrest protection must be used. Therefore, when working at an elevated position, always attach the fall-arrest D-ring in the back of the harness to an approved fall-arrest anchorage with a suitable fall-arrest lanyard or other connecting device. Where not possible, use alternative fall-arrest protection.
- **Always visually check** that: 1) each snap hook freely engages the intended D-ring or anchorage, and 2) the snap-hook keeper (latch) is completely closed with each use. Have a co-worker visually check to make sure that the locking snap hook attached to the fall-arrest D-ring (centered in the back of the harness) is properly secured. **Never** rely solely on feel or sound in attempting to determine that a snap hook is engaged.
- **Always visually check** that all buckles and connectors are properly closed before each use.
- **Before each use check** that: OPE equipment is free of burns, cuts, abrasions, broken strands or stitches, kinks, knots or excessive wear; 2) rivets are not bent, loose or missing; 3) buckles, D-rings and other hardware are not distorted or cracked; 4) buckle tongue does not bind on buckle and buckle holes are not damaged; and 5) hook keepers are free of burrs, functioning properly, clean and not bent. **If the OPE equipment does not pass the inspection, it should be removed from service immediately and destroyed or re-inspected by a competent person as defined by OSHA to determine its usability.**
- **Never** allow this equipment to come in contact with fire, high-temperature surfaces, welding sparks, or other heat sources.
- Harnesses **must** be properly sized and adjusted to fit user. **Always** wear harness snug to avoid injury.

- **Only use** locking snap hooks.
- OPE equipment **must only** be used for the specific purpose for which it is designed and intended.
- **Never** punch additional holes in or alter any OPE equipment in any way.
- **Never** attach ladder or rebar hooks onto a D-ring.
- **Never** attach multiple snap hooks onto a D-ring.
- **Never** attach anything to a D-ring other than a single, locking snap hook. The existence of another object attached to a D-ring may prevent or falsely indicate snap-hook engagement.
- For **personal** use only. **NOT** for towing or hoisting.
- **NOT** for recreational or sporting use.
- Assume the responsibility for determining that your OPE harness and equipment are in excellent condition at all times.
- Store your OPE equipment in a clean, dry area such as a tool chest or storage room.
- Klein strongly recommends that Klein components **NOT be interchanged** with other components made by other manufacturers, because Klein cannot guarantee that other manufacturers' components are free of defects in materials or workmanship.

### INSPECTION GRID

Competent person, as defined by OSHA, must inspect equipment every 6 months. Mark month of current year if it passes. Remove from service if it is not inspected every 6 months; if it fails, remove and replace.

- Read, understand and follow all instructions, cautions and warnings attached to and/or packed with this and all other occupational protective equipment before each use.
- For use by **properly trained professionals** only.
- **Employer** – Before allowing the use of this equipment, instruct your employees as to its proper use and alert them to these warnings.
- Harness **must** be worn so that the fall-arrest D-ring is centered in back.
- **Fall-arrest anchorage must** support a minimum of 5,000 lbs. (22.2kN) per attached worker and be independent of worker support.
- Attach fall-arrest connecting devices that meet OSHA standards only to the rear fall-arrest D-ring.
- Attach positioning connecting devices that meet OSHA standards only to the side D-rings. Side D-rings are **NOT** for fall arrest.
- **Positioning anchorages must** support at least twice the potential impact load of an employee's fall or 3,000 lbs. (13.3kN), whichever is greater.
- **Rig to avoid contact with structures below in the event of a fall.** The free-fall distance must not exceed 6 ft. (1.8m). If using a deceleration unit, add 3-1/2 ft. (1m) to free-fall distance to allow for unit extension.
- **For fall arrest, always** keep anchorage at or above shoulder height to minimize fall distance.
- OPE equipment **must be destroyed** if subjected to impact loading.
- OSHA requires that impact force in a fall **NOT** exceed an 1,800 lb. (8kN) limit with a harness. At a given weight, the longer the free fall, the greater the resulting impact force. Therefore, minimize slack in fall-arrest connecting device or use deceleration unit to stay under 1,800 lbs. (8kN).
- Whenever there is risk of a fall, personal fall-arrest protection must be used. Therefore, when working at an elevated position, always attach the fall-arrest D-ring in the back of the harness to an approved fall-arrest anchorage with a suitable fall-arrest lanyard or other connecting device. Where not possible, use alternative fall-arrest protection.
- **Always visually check** that: 1) each snap hook freely engages the intended D-ring or anchorage, and 2) the snap-hook keeper (latch) is completely closed with each use. Have a co-worker visually check to make sure that the locking snap hook attached to the fall-arrest D-ring (centered in the back of the harness) is properly secured. **Never** rely solely on feel or sound in attempting to determine that a snap hook is engaged.
- **Always visually check** that all buckles and connectors are properly closed before each use.
- **Before each use check** that: OPE equipment is free of burns, cuts, abrasions, broken strands or stitches, kinks, knots or excessive wear; 2) rivets are not bent, loose or missing; 3) buckles, D-rings and other hardware are not distorted or cracked; 4) buckle tongue does not bind on buckle and buckle holes are not damaged; and 5) hook keepers are free of burrs, functioning properly, clean and not bent. **If the OPE equipment does not pass the inspection, it should be removed from service immediately and destroyed or re-inspected by a competent person as defined by OSHA to determine its usability.**
- **Never** allow this equipment to come in contact with fire, high-temperature surfaces, welding sparks, or other heat sources.
- Harnesses **must** be properly sized and adjusted to fit user. **Always** wear harness snug to avoid injury.
- **Only use** locking snap hooks.
- OPE equipment **must only** be used for the specific purpose for which it is designed and intended.
- **Never** punch additional holes in or alter any OPE equipment in any way.
- **Never** attach ladder or rebar hooks onto a D-ring.
- **Never** attach multiple snap hooks onto a D-ring.
- **Never** attach anything to a D-ring other than a single, locking snap hook. The existence of another object attached to a D-ring may prevent or falsely indicate snap-hook engagement.
- For **personal** use only. **NOT** for towing or hoisting.
- **NOT** for recreational or sporting use.
- Assume the responsibility for determining that your OPE harness and equipment are in excellent condition at all times.
- Store your OPE equipment in a clean, dry area such as a tool chest or storage room.
- Klein strongly recommends that Klein components **NOT be interchanged** with other components made by other manufacturers, because Klein cannot guarantee that other manufacturers' components are free of defects in materials or workmanship.

### INSPECTION GRID

Competent person, as defined by OSHA, must inspect equipment every 6 months. Mark month of current year if it passes. Remove from service if it is not inspected every 6 months; if it fails, remove and replace.

| YEAR | JAN | FEB | MAR | APR | MAY | JUN | JUL | AUG | SEP | OCT | NOV | DEC |
|------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
